Faculty of Science and Technology Savitribai Phule Pune University Maharashtra, India

Curriculum for Third Year of Computer Engineering (2019 Course) (With effect from 2021-22)

http://unipune.ac.in/university_files/syllabi.htm

Prologue

It is with great pleasure and honor that I share the syllabi for Third Year of Computer Engineering (2019 Course) on behalf of Board of Studies, Computer Engineering. We, members of BoS are giving our best to streamline the processes and curricula design.

While revising syllabus, honest and sincere efforts are put to tune Computer Engineering program syllabus in tandem with the objectives of Higher Education of India, AICTE, UGC and affiliated University (SPPU) by keeping an eye on the technological advancements and industrial requirements globally.

Syllabus revision is materialized with sincere efforts, active participation, expert opinions and suggestions from domain professionals. Sincere efforts have been put by members of BoS, teachers, alumni, industry experts in framing the draft with guidelines and recommendations.

Case Studies are included in almost all courses. Course Instructor is recommended to discuss appropriate related recent technology/upgrade/Case Studies to encourage students to study from course to the scenario and think through the largest issues/ recent trends/ utility/ developing real world/ professional skills.

I am sincerely indebted to all the minds and hands who work adroitly to materialize these tasks. I really appreciate your contribution and suggestions in finalizing the contents.

Thanks, Dr. Varsha H. Patil Chairman, Board of Studies (Computer Engineering), SPPU, Pune

Savitribai Phule Pune University	
Third Year of Computer Engineering (2019 Course)
(With effect from Academic Year 2021-22)	
Table of Contents	

Sr. No.	Title	Page Number
1.	Program Outcomes	04
2.	Program Specific Outcomes	04
3.	Course Structure	05
	(Course titles, scheme for teaching, credit, examination and marking)	
4.	General Guidelines	07
5.	Course Contents (Semester V)	
	310241: Database Management Systems	10
	310242: Theory of Computation	13
	310243: Systems Programming and Operating System	16
	310244: Computer Networks and Security	19
	310245A: Elective I- Internet of Things and Embedded Systems	22
	310245B: Elective I- Human Computer Interface	25
	310245C: Elective I- Distributed Systems	28
	310245D: Elective I- Software Project Management	31
	310246: Database Management Systems Laboratory	34
	310247: Computer Networks and Security Laboratory	39
	310248: Laboratory Practice I	42
	310249: Seminar and Technical Communication	47
	<u>310250: Audit Course 5</u>	49
6.	Course Contents (Semester VI)	
	<u>310251: Data Science and Big Data Analytics</u>	56
	310252: Web Technology	59
	310253: Artificial Intelligence	62
	310254A: Elective II- Information Security	65
	310254B: Elective II- Augmented and Virtual Reality	68
	310254C: Elective II- Cloud Computing	71
	310254D: Elective II- Software Modeling and Architectures	74
	310255: Internship	77
	310256: Data Science and Big Data Analytics Laboratory	81
	<u>310257: Web Technology Laboratory</u>	86
	<u>310258: Laboratory Practice II</u>	89
	310259: Audit Course 6	96

	Savitribai Phule Pune University									
		Bachelor of Computer Engineering								
		Program Outcomes (POs)								
Learna	ers are expected to k	\sim								
PO1	Engineering knowledge	Apply the knowledge of mathematics, science, Engineering fundamentals, and an Engineering specialization to the solution of complex Engineering problems.								
	Knowledge	Identify, formulate, review research literature and analyze complex Engineering								
PO2	Problem analysis	problems reaching substantiated conclusions using first principles of mathematics,								
102	1 1001cm analysis	natural sciences and Engineering sciences.								
		Design solutions for complex Engineering problems and design system								
DO1	Design /	components or processes that meet the specified needs with appropriate								
PO3	Development of Solutions	consideration for the public health and safety, and the cultural, societal, and								
	Solutions	Environmental considerations.								
	Conduct	Use research-based knowledge and research methods including design of								
PO4	Investigations of	experiments, analysis and interpretation of data, and synthesis of the information								
	Complex	to provide valid conclusions.								
	Problems	Create, select, and apply appropriate techniques, resources, and modern								
PO5	Modern Tool	Engineering and IT tools including prediction and modeling to complex								
100	Usage	Engineering activities with an understanding of the limitations.								
	The Engineer and	Apply reasoning informed by the contextual knowledge to assess societal, health,								
PO6	The Engineer and Society	safety, legal and cultural issues and the consequent responsibilities relevant to the								
	Society	professional engineering practice.								
	Environment and	Understand the impact of the professional Engineering solutions in societal and								
PO7	PO7 Sustainability	Environmental contexts, and demonstrate the knowledge of, and need for								
	-	sustainable development. Apply ethical principles and commit to professional ethics and responsibilities and								
PO8	Ethics	norms of Engineering practice.								
	Individual and	Function effectively as an individual, and as a member or leader in diverse teams,								
PO9	Team Work	and in multidisciplinary settings.								
		Communicate effectively on complex Engineering activities with the Engineering								
PO10	Communication	community and with society at large, such as, being able to comprehend and write								
1010	Skills	effective reports and design documentation, make effective presentations, and give								
		and receive clear instructions.								
DO11	Project	Demonstrate knowledge and understanding of Engineering and management								
PO11	Management and Finance	principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary Environments.								
	rinance	Recognize the need for, and have the preparation and ability to engage in								
PO12	Life-long Learning	independent and life-long learning in the broadest context of technological change.								
	<u> </u>	Program Specific Outcomes (PSO)								
A grad	duate of the Comput	ter Engineering Program will demonstrate-								
		The ability to understand, analyze and develop computer programs in the areas								
PSO1	-	, system software, multimedia, web design, big data analytics, and networking for								
		mputer-based systems of varying complexities.								
	-	kills- The ability to apply standard practices and strategies in software project								
PSO2		open-ended programming environments to deliver a quality product for business								
	success.	and Entropyonounship. The shility to smalley and low another laws								
PSO3		and Entrepreneurship - The ability to employ modern computer languages, atforms in creating innovative career paths to be an entrepreneur and to have a zest								
г 3 03	for higher studies.	anorms in creating innovative career paths to be an entrepreneur and to have a zest								
	ior inglier studies.

** Inter Internsh	nship: ip guidelines are provided	in co	ourse	curric	culum s	sheet.								

General Guidelines

- 1. Every undergraduate program has its own objectives and educational outcomes. These objectives and outcomes are furnished by considering various aspects and impacts of the curriculum. These **Program Outcomes (POs)** are categorically mentioned at the beginning of the curriculum (ref: NBA Manual). There should always be a rationale and a goal behind the inclusion of a course in the curriculum. Course Outcomes though highly rely on the contents of the course; many-a-times are generic and bundled. The **Course Objectives**, **Course Outcomes** and **CO-PO mappings matrix** justifies the motives, accomplishment and prospect behind learning the course. The Course Objectives, Course Outcomes and CO-PO Mapping Matrix are provided for reference and these are indicative only. The course instructor may modify them as per his or her perspective.
- 2. @: <u>CO and PO Mapping Matrix</u> (Course Outcomes and Program Outcomes)- The <u>expected</u> attainment mapping matrix at end of course contents, indicates the correlation levels of 3, 2, 1 and '-'. The notation of 3, 2 and 1 denotes substantially (high), moderately (medium) and slightly (low). The mark '-'indicates that there is no correlation between the respective CO and PO.
- 3. #: <u>Elaborated examples/Case Studies-</u> For each course, contents are divided into six units-I, II, III, IV, V and VI. Elaborated examples/Case Studies are included at the end of each unit to explore how the learned topics apply to real world situations and need to be explored to assist students to increase their competencies, inculcating the specific skills, building the knowledge to be applicable in any given situation along with an articulation. One or two sample exemplars or case studies are included for each unit; instructor may extend the same with more. Exemplar/Case Studies may be assigned as self-study by students and to be excluded from theory examinations.
- **4.** *: For each unit contents, the desired content attainment mapping is indicated with Course Outcome(s). Instructor may revise the same as per their viewpoint.
- **5.** For laboratory courses, set of suggested assignments is provided for reference. Laboratory Instructors may design suitable set of assignments for respective course at their level. Beyond curriculum assignments and mini-project may be included as a part of laboratory work. The Inclusion of few optional assignments that are intricate and/or beyond the scope of curriculum will surely be the value addition for the students and it will satisfy the intellectuals within the group of the learners and will add to the perspective of the learners.
- 6. For each laboratory assignment, it is essential for students to draw/write/generate flowchart, algorithm, test cases, mathematical model, Test data set and comparative/complexity analysis (as applicable). Batch size for practical and tutorial may be as per guidelines of authority.
- 7. For each course, irrespective of the examination head, the instructor should motivate students to read and publish articles, research papers related to recent development and invention in the field.
- **8.** For laboratory, instructions have been included about the conduction and assessment of laboratory work. <u>These guidelines are to be strictly followed.</u> Use of open source software is appreciated.
- 9. <u>Term Work [1]</u>-Term work is continuous assessment that evaluates a student's progress throughout the semester^[1]. Term work assessment criteria specify the standards that must be met and the evidence that will be gathered to demonstrate the achievement of course outcomes. Categorical assessment criteria for the term work should establish unambiguous standards of achievement for each course outcome. They should describe what the learner is expected to perform in the laboratories or on the fields to show that the course outcomes have been achieved.

It is recommended to conduct internal monthly practical examination as part of continuous assessment.

Students' work will be evaluated typically based on the criteria like attentiveness, proficiency in execution of the task, regularity, punctuality, use of referencing, accuracy of language, use of supporting evidence in drawing conclusions, quality of critical thinking and similar performance measuring criteria.

- 10. <u>Laboratory Journal-</u> Program codes with sample output of all performed assignments are to be submitted as softcopy. Use of DVD or similar media containing students programs maintained by Laboratory In-charge is highly encouraged. For reference one or two journals may be maintained with program prints in the Laboratory. As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers as part of write-ups and program listing to journal may be avoided. <u>Submission of journal/ term work in the form of softcopy is desirable and appreciated.</u>
- 11. <u>Tutorial [1]</u> Tutorials can never be an individual course but an additional aid to the learners. Tutorials help the learners to inculcate the contents of the course with focused efforts on small group of the learners. Tutorial conduction should concentrate more on simplifying the intricacies converging to clear understanding and application. <u>Assessment of tutorial work is to be done</u> <u>in a manner similar to assessment of term-work; do follow same guidelines.</u>
- 12. <u>Audit Course [1]</u>[±] The student registered for audit course shall be awarded the grade AP/PP (Audit Course Pass) and the grade 'AP'/'PP' shall be included in the Semester grade report for that course, provided student has the minimum attendance as prescribed by the Savitribai Phule Pune University and satisfactory performance and secured a passing grade in that audit course. No grade points are associated with this 'AP'/'PP'' grade and performance in these courses is not accounted in the calculation of the performance indices SGPA and CGPA. Evaluation of audit course will be done at institute level itself.
- **13.** UGC has issued the UGC (Credit Framework for online learning courses through SWAYAM) Regulation 2016 advising the Universities to identify courses where credits can be transferred on to the academic record of the students for courses done on SWAYAM. AICTE has also put out gazette notification in 2016 and subsequently for adoption of these courses for credit transfer [2].

SWAYAM is a programme initiated by Government of India and designed to achieve the three cardinal principles of Education Policy viz., access, equity, and quality. This is done through a platform that facilitates hosting of the courses to be accessed by anyone, anywhere at any time. Courses delivered through SWAYAM are interactive, prepared by the best teachers in the country and are available, free of cost to any learner. However, learners wanting a SWAYAM certificate should register for the final proctored exams that come at a fee and attend in-person at designated center on specified dates. Eligibility for the certificate is generally announced on the course page. <u>Universities/colleges approving credit transfer for these courses can use the marks/certificate obtained in these courses for the same.[2]</u>

Unit I F	ormal Language T Autom		07 Hours								
	· -		Machine (FSM), Language								
accepted by FA, Defi	e	0 0	FA and NFA), epsilon- NFA and								
inter-conversion. Mir			A and INTA), cpsnon- INTA and								
		nines -Definition, model	s, inter-conversion.								
#Exemplar/Case											
Studies	FSM for vendin	g machine, spell checke	er								
*Mapping of Cour Outcomes for Unit I											
Unit II	Regular Expre	ssions (RE)	07 Hours								
Introduction, Operato	ors of RE, Precedenc	e of operators, Algebrai	c laws for RE, Language to Regular								
			A, DFA, DFA to RE using Arden's								
	_	languages, Closure an	d Decision properties of Regular								
languages. Myhill-Ne	erode theorem.										

#Exemplar/Case Studies	RE in text search and replace									
*Mapping of Course Outcomes for Unit II	CO2									
Unit III Context	Free Grammar (CFG) and Context Free Language (CFL)	07 Hours								
Basic Elements of Grammar, Formal Definition of Context Free Grammar, Sentential form, Derivation and Derivation Tree/ Parse Tree, Context Free Language (CFL), Ambiguous Grammar, writing grammar for language. Simplification of CFG : Eliminating C-productions, unit productions, useless production, useless symbols. Normal Forms: Chomsky Normal Form, Greibach Normal Form, Pumping Lemma for CFG, Closure properties of CFL, Decision properties of CFL, Chomsky Hierarchy, Cock-Younger-Kasami Algorithm.										
#Exemplar/Case Studies	Parser, CFG for Palindromes, Parenthes	is Match								
*Mapping of Course Outcomes for Unit III	CO3									
Unit IV	Pushdown Automata (PDA)	07 Hours								
	finition of PDA, Equivalence of Acceptar PDA (NPDA), PDA and Context Free L terministic CFLs.	•								
#Exemplar/Case Studies	Parsing and PDA: Top-Down Parsin showing use of PDA	g, Bottom-up Parsing simulation								
*Mapping of Course Outcomes for Unit IV	CO4									
Unit V	Turing Machines (TM)	07 Hours								
Machines, Design of TM with Turing Machine, V	Formal definition of Turing Machines, I, Description of TM, Techniques for TM ariants of Turing Machines, Halting Prob anguage, Reducibility, Recursion Theore	Construction, Computing function lem of TM, Halting vs Looping, A								
#Exemplar/Case Studies	Algorithms using Turing Machine									
*Mapping of Course Outcomes for Unit V	CO5									
Unit VI Com	putability and Complexity Theory	07 Hours								
Computability Theory : Decidable Problems and Un-decidable Problems, Church-Turing Thesis. Reducibility : Undecidable Problems that is recursively enumerable, A Simple Un-decidable. Complexity Classes : Time and Space Measures, The Class P, Examples of problems in P, The Class NP, Examples of problems in NP, P Problem Versus NP Problem, NP-completeness and hard Problems.										
#Exemplar/Case Studies	Traveling salesman problem, Post Corre	espondence Problem (PCP)

Savitribai Phule Pune University									
Third Year of Computer Engineering (2019 Course) 310243: Systems Programming and Operating System									
	Teaching Scheme: Credit: 03 Examination Scheme:								
ГН: 03 Mid-Sem (TH) : 30 Marks									
Hours/Week End-Sem (TH): 70 Marks									
Prerequisites Courses:	Programming and P	roblem solving (110005), Data Structures and							
Algorithms (210252), Pr	inciples of Program	ming Languages (210255), Microprocessor (210254)							
Companion Course: La	boratory Practice I ((310248)							
Course Objectives:									
• To get acquainted	d with the basics of S	System Programming							
• To acquire know!	ledge of data structu	res used in the design of System Software							
• To be familiar w loading	with the format of o	bject modules, the functions of linking, relocation, and							
• To comprehend t	he structures and fur	nctions of Operating Systems and process management.							
• To deal with cond	currency and deadlo	ck in the Operating System							
• To learn and und	erstand memory man	nagement of Operating System							
CO2: Identify suitable CO3: Compare difference CO4: Implement and CO5: Identify the mark CO6: Demonstrate rest Unit I Introduction to Systems as software: system software Evolution of component Interpreter, Loader, Link Elements of Assembly I	Course Outcomes: On completion of the course, learners should be able to CO1: Analyze and synthesize basic System Software and its functionality. CO2: Identify suitable data structures and Design & Implement various System Software CO3: Compare different loading schemes and analyze the performance of linker and loader CO4: Implement and Analyze the performance of process scheduling algorithms CO5: Identify the mechanism to deal with deadlock and concurrency issues CO6: Demonstrate memory organization and memory management policies Course Contents Unit I Introduction 08 Hours Introduction to Systems Programming, Need of systems programming, Software Hierarchy, Types of software: system software and application software, Machine structure. Evolution of components of systems programming: Text Editors, Assembler, Macros, Compiler, Interpreter, Loader, Linker, Debugger, Device Drivers, Operating System. Elements of Assembly Language Programming: Assembly Language statements, Benefits of Assembly Language, A simple Assembly scheme, Pass Structure of Assembler.								
		Directives, Intermediate code forms, Pass I and Pass II							
Studies		ng tools like GDB							
Outcomes for Unit I	*Mapping of Course Outcomes for Unit I CO1, CO2, CO3								
Unit IIMacro Processor and Compilers06 Hours									
Unit inMacro Processor and CompilersOb HoursIntroduction, Features of a Macro facility: Macro instruction arguments, Conditional Macro expansion, Macro calls within Macros, Macro instructions, Defining Macro, Design of two pass Macro processor, Concept of single pass Macro processor.Introduction to Compilers: Phases of Compiler with one example, Comparison of compiler and Interpreter.

Outcomes for Unit II Unit III	Network Layer	08 Hours					
Introduction: Functions of Network layer. Switching Techniques: Circuit switching, Message Switching, Packet Switching. IP Protocol: Classes of IP (Network addressing), IPv4, IPv6, Network Address Translation, Sub-netting, CIDR. Network layer Protocols: ARP, RARP, ICMP, IGMP. Network Routing and Algorithms: Static Routing, Dynamic Routing, Distance Vector Routing, Link State Routing, Path Vector. Routing Protocols: RIP, OSPF, BGP, MPLS. Routing in MANET: AODV, DSR, Mobile IP.							
#Exemplar/Case Studies	Demonstration of Routing Protocols or	simulator.					
*Mapping of Course Outcomes for Unit III	CO3						
Unit IV	Transport Layer	07 Hours					
Multiplexing, Congestio Congestion control and O Wireless networks.	Connection establishment, Connection ron n Control. Transport Layer Protocols : Quality of Service (QoS), Differentiated	TCP and UDP, SCTP, RTP,					
#Exemplar/Case Studies	Demonstration of Transport layer proto	cols on Simulator.					
*Mapping of Course Outcomes for Unit IV	CO4						
Unit V Introduction, Web and HT DHCP, SNMP.	Application Layer TP, Web Caching, DNS, Email: SMTP, MI	06 Hours ME, POP3, Webmail, FTP, TELNET,					
#Exemplar/Case Studies	Study of Application Layer protocols us Wireshark	ing network protocol analyzer. e.g.					
*Mapping of Course Outcomes for Unit V	CO5						
Unit VI	Security	07 Hours					
Introduction, Security services, Need of Security, Key Principles of Security, Threats and Vulnerabilities, Types of Attacks, ITU-T X.800 Security Architecture for OSI, Security Policy and mechanisms, Operational Model of Network Security, Symmetric and Asymmetric Key Cryptography. Security in Network, Transport and Application: Introduction of IPSec, SSL, HTTPS, S/MIME, Overview of IDS and Firewalls.							
#Exemplar/Case Studies	Study of security protocols in Network, Transport and Application Layer using network protocol analyzer. e.g. Wireshark						
*Mapping of Course Outcomes for Unit VI	CO6

Hours/Week End-Sem (TH): 70 Marks										
Prerequisites Courses:	Prerequisites Courses: Computer Networks and Security (310244)									
Companion Course: L	aboratory Practice I	(310248)								
 Course Objectives: To understand fundamentals of Internet of Things (IoT) and Embedded Systems To learn advances in Embedded Systems and IoT To learn methodologies for IoT application development To learn the IoT protocols, cloud platforms and security issues in IoT To learn real world application scenarios of IoT along with its societal and economic impact using case studies and real time examples Course Outcomes: On completion of the course, learners should be able to CO1: Understand the fundamentals and need of Embedded Systems for the Internet of Things CO2: Apply IoT enabling technologies for developing IoT systems 										
	protocols for makin l based IoT systems Develop secured IoT	esigning and implemen ag IoT devices commun applications ourse Contents								
Unit I In	troduction to Emb		07 Hours							
basics: General Process	ors in Computer Vs s of Microcontrolle	Embedded Processors ers, System-On-Chip a	stems, Real time tasks. Processor , Microcontrollers, Microcontroller and its examples, Components of							
#Exemplar/Case Studies	Installation of Re	eal Time Operating Sys	stem							
*Mapping of Course Outcomes for Unit I	CO1,CO2									
Unit II	Unit IIInternet of Things : Concepts07 Hours									
Introduction to Internet of Things (IoT) : Definition, Characteristics of IoT, Vision, Trends in Adoption of IoT, IoT Devices, IoT Devices Vs Computers, Societal Benefits of IoT, Technical Building Blocks. Physical Design of IoT : Things in IoT, Interoperability of IoT Devices, Sensors and Actuators, Need of Analog / Digital Conversion. Logical Design of IoT : IoT functional blocks, IoT enabling technologies, IoT levels and deployment templates, Applications in IoT.										
#Exemplar/Case Studies		ce: Raspberry Pi / Ard ng. Other IoT Devices.	uino: Programming: Arduino IDE/							
*Mapping of Course Outcomes for Unit II	CO1,CO2									

Unit III	IoT: Design Methodology	07 Hours						
	y: Steps, Basics of IoT Networking,	Networking Components, Internet						
Structure, Connectivity Technologies, IoT Communication Models and IoT Communication APIs,								
	Sensor Networks, Four pillars of IoT: M2M, SCADA, WSN, RFID.							
#Exemplar/Case	Home Automation using IoT co							
Studies	Communication APIs.							
*Mapping of Course	Course							
Outcomes for Unit III	CO3,CO4							
Unit IV	IoT Protocols	07 Hours						
	for IoT, M2M and WSN Protocols, RFIE							
	ased Protocols: MQTT (Secure), 6LoW							
#Exemplar/Case	ased i rotocois. MQ11 (Secure), ollow	I AN, LONA.						
Studies	LoRa based Smart Irrigation System.							
*Mapping of Course	CO4,CO5							
Outcomes for Unit IV								
Unit V	Cloud Platforms for IoT	07 Hours						
	king, Introduction to Cloud Storage Mod							
	Cloud for IoT. Python Web Application	5 0						
11 1	nent with Django, Amazon Web Service	es for IoT, SkyNet IoT Messaging						
Platform, RESTful Web S	Service, GRPC, SOAP.							
#Exemplar/Case	Smart parking, Forest Fire Detection							
Studies	Smart parking, i brest i ne Detection							
*Mapping of Course	004 005							
	CO4, CO5							
Outcomes for Unit V	04,005							
Outcomes for Unit V Unit VI	Security in IoT	07 Hours						
Unit VI

interaction style, Natural Language, Eight Golden rules of Interface design, Prevent errors, Ensuring Human control while increasing automation. **Theories**: Design-by-level, Stages of action, Consistency, Contextual Theories, Dynamic theories.

#Exemplar/ Studies	Case	Registration form design.				
*Mapping of Outcomes for	pping of Course comes for Unit II CO1,CO2					
Unit III	Intera	action Styles and HCI in Software	07 Hours			
		Process				

Design, Process of Interaction Design. **Interaction styles**: Command line, Menu Selection, Form fill-in, Direct Manipulation. **Graphical User Interface**: Popularity of Graphics, Concept of direct manipulation, Advantages, Disadvantages and characteristics of Graphical user interface. **Web User Interface**: Popularity and Characteristics, Merging of Graphical business systems and the Web-Characteristics of Intranet versus Internet, Web page versus application design, Principles for user interface design, Software life cycle, Usability Engineering, Iterative design and prototyping, Design Rationale.

#Exemplar/Cas Studies	se	Comparison - GUI and Web design with	h a real time example.
*Mapping of Outcomes for U	Course Jnit III	CO1,CO3,CO5	
Unit IV	Usahilif	v Evaluation and Universal Design	07 Hours

User interface design process: Designing for People: Seven commandments, Usability Assessment in the Design process, Common Usability problems, Practical and Objective measures of Usability, Formative and Summative evaluation, Usability specifications for evaluation, Analytic methods, Model based analysis, GOMS model, Empirical methods, Field studies, Usability testing in Laboratory, Controlled experiments, Heuristic Evaluation, Cognitive Walkthrough.

Evaluation framework: Paradigms and techniques, DECIDE: a framework to guide evaluation, Universal design principles, Multi-modal interaction, Designing for diversity.

#Exemplar/ Studies	Case	GOMS model - Adding items to a cart of	of e-shopping website.
*Mapping of Outcomes for	of Course or Unit IV	C01,C03	
Unit V		HCI Paradigms	07 Hours

Paradigms for Interaction: Time sharing, Video display units, Programming toolkits, Personal computing, The metaphor, Direct manipulation, Hypertext, Computer-supported cooperative work, Agent based interfaces. **Ubiquitous Computing**: Sensor-based and context-aware interaction,

Data Integrity versus Data immunity, Handling missing data, Data entry and fudgeability, Auditing versus Editing, Retrieval in Physical World, Retrieval in Digital world, Constrained Natural Language output, Five stage search framework, Dynamic queries and faceted search, The social aspects of search.

Pattern Recognition: Introduction, Examples, Role of Machine Learning, Pattern Recognition Process, Pattern Recognition in HCI.

#Exemplar/ Studies	Case	Interface Design- Pattern gesture recogn	nition
*Mapping of Outcomes for	of Course or Unit V	C01,C03,C04	
Unit VI	HCI	for Mobile and Handheld devices	07 Hours
Designing fo	r Mobile a	nd other devices: Anatomy of a Mobile a	app, Mobile form factors, Handheld

format apps, Tablet format apps, Mini-tablet format apps, Mobile Navigation, Content, and control idioms- browse controls, Navigation and toolbars, Drawers, Tap-to-reveal and direct manipulation, Searching, Sorting and Filtering, Welcome and help screens, Multi-touch gestures, Inter-app integration, Android Accessibility Guidelines.

Other devices: Designing for kiosks, Designing for 10-foot interfaces, Designing for automotive interfaces, Designing for audible interfaces.

Savitribai Phule Pune University Third Year of Computer Engineering (2019 Course) 310246:Database Management Systems Laboratory

Credit Scheme: 02

Examination Scheme and Marks Term work: 25 Marks Practical: 25 Marks

Home

Companion Course: Database Management Systems (310241)

Course Objectives:

Teaching Scheme

Practical: 04 Hours/Week

- To develop Database programming skills
- To develop basic Database administration skills
- To develop skills to handle NoSQL database
- To learn, understand and execute process of software application development

Course Outcomes:

On completion of the course, learners will be able to

CO1: Design E-R Model for given requirements and convert the same into database tables

CO2: Design schema in appropriate normal form considering actual requirements

CO3: Implement SQL queries for given requirements, using different SQL concepts

CO4: Implement PL/SQL Code block for given requirements

CO5: Implement NoSQL queries using MongoDB

CO6: Design and develop application considering actual requirements and using database concepts

Guidelines for Instructor's Manual

The instructor's manual is to be developed as a reference and hands-on resource. It should include prologue (about University/program/ institute/ department/foreword/ preface), curriculum of the course, conduction and Assessment guidelines, topics under consideration, concept, objectives, outcomes, set of typical applications/assignments/ guidelines, and references.

Guidelines for Student's Laboratory Journal

The laboratory assignments are to be submitted by student in the form of journal. Journal consists of Certificate, table of contents, and handwritten write-up of each assignment (Title, Date of Completion, Objectives, Problem Statement, Software and Hardware requirements, Assessment grade/marks and assessor's sign, Theory- Concept in brief, algorithm, flowchart, test cases, Test Data Set(if applicable), mathematical model (if applicable), conclusion/analysis. Program codes with sample output of all performed assignments are to be submitted as softcopy. As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers as part of write-ups and program listing to journal must be avoided. Use of DVD containing students programs maintained by Laboratory In-charge is highly encouraged. For reference one or two journals may be maintained with program prints in the Laboratory.

Guidelines for Laboratory /Term Work Assessment

Continuous assessment of laboratory work should be based on overall performance of Laboratory assignments by a student. Each Laboratory assignment assessment will assign grade/marks based on parameters, such as timely completion, performance, innovation, efficient codes, and punctuality.

Guidelines for Practical Examination

Problem statements must be decided jointly by the internal examiner and external examiner. During practical assessment, maximum weightage should be given to satisfactory implementation of the problem statement. Relevant questions may be asked at the time of evaluation to test the student's understanding of the fundamentals, effective and efficient implementation. This will encourage, transparent evaluation and fair approach, and hence will not create any uncertainty or doubt in the minds of the students. So, adhering to these principles will consummate our team efforts to the promising start of student's academics.

http://collegecirculars.unipune.ac.in/sites/documents/Syllabus2020/Forms/AllItems.aspx

Guidelines for Laboratory Conduction

The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The assignment framing policy need to address the average students and inclusive of an element to attract and promote the intelligent students. Use of open source software is encouraged. Based on the concepts learned. Instructor may also set one assignment or mini-project that is suitable to respective branch beyond the scope of syllabus. Operating System recommended :- 64-bit Open source Linux or its derivative

Programming tools recommended: - MYSQL/Oracle, MongoDB, ERD plus, ER Win

Virtual Laboratory:

• <u>http://vlabs.iitb.ac.in/vlabs-dev/labs/dblab/labs/index.php</u>

Suggested List of Laboratory Experiments/Assignments Assignments from all Groups (A, B, C) are compulsory

Sr. No.	Group A: SQL and PL/SQL
1.	ER Modeling and Normalization: Decide a case study related to real time application in group of 2-3 students and formulate a problem statement for application to be developed. Propose a Conceptual Design using ER features using tools like ERD plus, ER Win etc. (Identifying entities, relationships between entities, attributes, keys, cardinalities, generalization, specialization etc.) Convert the ER diagram into relational tables and normalize Relational data model. Note: Student groups are required to continue same problem statement throughout all the
	assignments in order to design and develop an application as a part Mini Project. Further assignments will be useful for students to develop a backend for system. To design front end interface students should use the different concepts learnt in the other subjects also.
2.	 SQL Queries: a. Design and Develop SQL DDL statements which demonstrate the use of SQL objects such as Table, View, Index, Sequence, Synonym, different constraints etc. b. Write at least 10 SQL queries on the suitable database application using SQL DML statements.
	Note: Instructor will design the queries which demonstrate the use of concepts like Insert, Select, Update, Delete with operators, functions, and set operator etc.
3.	SQL Queries - all types of Join, Sub-Query and View: Write at least 10 SQL queries for suitable database application using SQL DML statements.
	Note: Instructor will design the queries which demonstrate the use of concepts like all types of Join, Sub-Query and View

	Unnamed PL/SQL code block: Use of Control structure and Exception handling is
	mandatory.
	Suggested Problem statement:
	Consider Tables:
	1. Borrower(Roll_no, Name, DateofIssue, NameofBook, Status)
	2. Fine(Roll_no,Date,Amt)
	• Accept Roll no and NameofBook from user.
	• Check the number of days (from date of issue).
	• If days are between 15 to 30 then fine amount will be Rs 5per day.
	 If no. of days>30, per day fine will be Rs 50 per day and for days less than 30, Rs. 5 per day.
	• After submitting the book, status will change from I to R.
	• If condition of fine is true, then details will be stored into fine table.
	• Also handles the exception by named exception handler or user define exception handle OR
	Write a PL/SQL code block to calculate the area of a circle for a value of radius varying from 5
	9. Store the radius and the corresponding values of calculated area in an empty table named are
	consisting of two columns, radius and area.
5.	statement. Named PL/SQL Block: PL/SQL Stored Procedure and Stored Function.
5.	Named PL/SQL Block: PL/SQL Stored Procedure and Stored Function. Write a Stored Procedure namely proc_Grade for the categorization of student. If marks scored students in examination is <=1500 and marks>=990 then student will be placed in distinctic category if marks scored are between 989 and 900 category is first class, if marks 899 and 8
5.	Named PL/SQL Block: PL/SQL Stored Procedure and Stored Function. Write a Stored Procedure namely proc_Grade for the categorization of student. If marks scored students in examination is <=1500 and marks>=990 then student will be placed in distinction
5.	Named PL/SQL Block: PL/SQL Stored Procedure and Stored Function. Write a Stored Procedure namely proc_Grade for the categorization of student. If marks scored students in examination is <=1500 and marks>=990 then student will be placed in distinctic category if marks scored are between 989 and 900 category is first class, if marks 899 and 8 category is Higher Second Class.
5.	Named PL/SQL Block: PL/SQL Stored Procedure and Stored Function. Write a Stored Procedure namely proc_Grade for the categorization of student. If marks scored students in examination is <=1500 and marks>=990 then student will be placed in distincti category if marks scored are between 989 and 900 category is first class, if marks 899 and 8 category is Higher Second Class. Write a PL/SQL block to use procedure created with above requirement. Stud_Marks(name, total_marks) Result(Roll,Name, Class)
5.	Named PL/SQL Block: PL/SQL Stored Procedure and Stored Function. Write a Stored Procedure namely proc_Grade for the categorization of student. If marks scored students in examination is <=1500 and marks>=990 then student will be placed in distinctic category if marks scored are between 989 and 900 category is first class, if marks 899 and 8 category is Higher Second Class. Write a PL/SQL block to use procedure created with above requirement. Stud_Marks(name, total_marks) Result(Roll,Name, Class) Note: Instructor will frame the problem statement for writing stored procedure and Function line with above statement. Cursors: (All types: Implicit, Explicit, Cursor FOR Loop, Parameterized Cursor)
	Named PL/SQL Block: PL/SQL Stored Procedure and Stored Function. Write a Stored Procedure namely proc_Grade for the categorization of student. If marks scored students in examination is <=1500 and marks>=990 then student will be placed in distinctic category if marks scored are between 989 and 900 category is first class, if marks 899 and 8 category is Higher Second Class. If the data

	7.	Database Trigger (All Types: Row level and Statement level triggers, Before and After
		Triggers).
		Write a database trigger on Library table. The System should keep track of the records that are being updated or deleted. The old value of updated or deleted records should be added in Library_Audit table.
		Note: Instructor will Frame the problem statement for writing PL/SQL block for all types of Triggers in line with above statement.
	8.	Database Connectivity: Write a program to implement MySQL/Oracle database connectivity with any front end language to implement Database navigation operations (add, delete, edit etc.)
		Group B: NoSQL Databases
	1.	MongoDB Queries: Design and Develop MongoDB Queries using CRUD operations. (Use CRUD operations, SAVE method, logical operators etc.).
	2.	MongoDB - Aggregation and Indexing: Design and Develop MongoDB Queries using aggregation and indexing with suitable example using MongoDB.
	3.	MongoDB - Map reduces operations: Implement Map reduces operation with suitable example using MongoDB.
ľ	4.	Database Connectivity:
		Write a program to implement MongoDB database connectivity with any front end language to implement Database navigation operations (add, delete, edit etc.)
		Group C: Mini Project
	1.	 Using the database concepts covered in Group A and Group B, develop an application with following details: Follow the same problem statement decided in Assignment -1 of Group A. Follow the Software Development Life cycle and other concepts learnt in Software Engineering Course throughout the implementation. Develop application considering: Front End : Java/Perl/PHP/Python/Ruby/.net/any other language Backend : MongoDB/MySQL/Oracle Test and validate application using Manual/Automation testing. Student should develop application in group of 2-3 students and submit the Project Report which will consist of documentation related to different phases of Software Development Life Cycle: Title of the Project, Abstract, Introduction Software Requirement Specification Conceptual Design using ER features, Relational Model in appropriate Normalize form Graphical User Interface, Source Code Testing document Conclusion.
		 Note: Instructor should maintain progress report of mini project throughout the semester from project group Practical examination will be on assignments given above in Group A and Group B only Mini Project in this course should facilitate the Project Based Learning among students

Savitribai Phule Pune University Third Year of Computer Engineering (2019 Course) 310247:Computer Networks and Security Laboratory

310247:Computer Networks and Security Laboratory						
Teaching Scheme Practical: 02 Hours/Week	Credit Scheme: 01	Examination Scheme and Marks Term work: 25 Marks Oral: 25 Marks				
Companion Course: Computer Net	work and Security (310	244)				
Course Objectives:						
• To learn computer network h	ardware and software c	omponents				
• To learn computer network to						
	_	nodern technologies and applications				
• To learn modern tools for net	•					
• To learn network programmi	ng					
Course Outcomes:						
On completion of the course, learner	s will be able to					
CO1: Analyze the requirements	of network types, topol	ogy and transmission media				
CO2: Demonstrate error control	, flow control technique	es and protocols and analyze them				
CO3: Demonstrate the subnet fo algorithms	rmation with IP allocat	ion mechanism and apply various routing				
CO4: Develop Client-Server arc	hitectures and prototyp	es				
CO5: Implement web application	ns and services using a	oplication layer protocols				
CO6: Use network security serv						
The instructor's manual is to be deprologue (about University/program	/ institute/ department/f es, topics under consid	e and hands-on resource. It should include foreword/ preface), curriculum of the course, eration, concept, objectives, outcomes, set of

Guidelines for Laboratory /Term Work Assessment

Continuous assessment of laboratory work should be based on overall performance of Laboratory assignments by a student. Each Laboratory assignment assessment will assign grade/marks based on parameters, such as timely completion, performance, innovation, efficient codes, punctuality and

Guidelines for Oral Examination

Oral examination should be jointly conducted by the internal examiner and external examiner. Relevant questions may be asked at the time of evaluation to test the student's understanding of the fundamentals, effective and efficient implementations in term work. This will encourage, transparent evaluation and fair approach, and hence will not create any uncertainty or doubt in the minds of the students. So, adhering to these principles will consummate our team efforts to the promising start of student's academics.

in the Laboratory.

Guidelines for Laboratory Conduction

The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The assignment framing policy need to address the average students and inclusive of an element to attract and promote the intelligent students. Use of open source software is encouraged. Based on the concepts learned. Instructor may also set one assignment or mini-project that is suitable to respective branch beyond the scope of syllabus. Operating System recommended: -64-bit Open-source Linux or its derivative

Programming tools recommended: - Open-Source /C/C++/JAVA

Programming tool like G++/GCC, Wireshark/Ethereal and Packet Tracer

Virtual Laboratory:

• <u>http://vlabs.iitb.ac.in/vlab/</u>

Suggested List of Laboratory Experiments/Assignments Assignments from all Groups (A, B, C) are compulsory Group A (Unit I and II): Attempt any two assignments from Sr. No. 1 to 3. Assignments 4 Sr. and 5 are compulsory. No. 1. Setup a wired LAN using Layer 2 Switch. It includes preparation of cable, testing of cable using line tester, configuration machine using IP addresses, testing using PING utility and demonstrating the PING packets captured traces using Wireshark Packet Analyzer Tool. 2. Demonstrate the different types of topologies and types of transmission media by using a packet tracer tool. 3. Setup a WAN which contains wired as well as wireless LAN by using a packet tracer tool. Demonstrate transfer of a packet from LAN 1 (wired LAN) to LAN2 (Wireless LAN). 4. Write a program for error detection and correction for 7/8 bits ASCII codes using Hamming Codes or CRC. Write a program to simulate Go back N and Selective Repeat Modes of Sliding Window Protocol 5. in Peer-to-Peer mode. Group B (Unit III and IV) Write a program to demonstrate Sub-netting and find subnet masks. 6. Write a program to implement link state /Distance vector routing protocol to find suitable path 7. for transmission. Use packet Tracer tool for configuration of 3 router network using one of the following protocol 8. RIP/OSPF/BGP. Write a program using TCP socket for wired network for following 9. a. Say Hello to Each other b. File transfer c. Calculator 10. Write a program using UDP Sockets to enable file transfer (Script, Text, Audio and Video one file each) between two machines. Group C (Unit V and VI): Assignment Sr. No. 11 is Compulsory and attempt any four from Assignments Sr. No 12 to 17. 11. Write a program for DNS lookup. Given an IP address as input, it should return URL and viceversa. 12. Installing and configure DHCP server and write a program to install the software on remote machine.

13.	3. Capture packets using Wireshark, write the exact packet capture filter expressions to accomplish												
	the	followi	ng and	save the	e output	in file:							
	1. C	Capture	all TCI	P traffic	to/fron	n Faceb	ook, du	ring the	e time w	hen yo	u log in	to your l	Facebook
	account

The instructor's manual is to be dev prologue (about University/program/ i	eloped as a reference nstitute/ department/f , topics under conside	e and hands-on resource. It should include oreword/ preface), curriculum of the course eration, concept, objectives, outcomes, set o						

Guidelines for Student's Laboratory Journal

The laboratory assignments are to be submitted by student in the form of journal. Journal consists of Certificate, table of contents, and handwritten write-up of each assignment (Title, Date of Completion, Objectives, Problem Statement, Software and Hardware requirements, Assessment grade/marks and assessor's sign, Theory- Concept in brief, algorithm, flowchart, test cases, Test Data Set(if applicable), mathematical model (if applicable), conclusion/analysis. Program codes with sample output of all performed assignments are to be submitted as softcopy. As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers as part of write-ups and program listing to journal must be avoided. Use of DVD containing students programs maintained by Laboratory In-charge is highly encouraged. For reference one or two journals may be maintained with program prints in the Laboratory.

Guidelines for Laboratory /Term Work Assessment

Continuous assessment of laboratory work should be based on overall performance of Laboratory assignments by a student. Each Laboratory assignment assessment will assign grade/marks based on parameters, such as timely completion, performance, innovation, efficient codes, punctuality and

Guidelines for Practical Examination

Problem statements must be decided jointly by the internal examiner and external examiner. During practical assessment, maximum weightage should be given to satisfactory implementation of the problem statement. Relevant questions may be asked at the time of evaluation to test the student's understanding of the fundamentals, effective and efficient implementation. This will encourage, transparent evaluation and fair approach, and hence will not create any uncertainty or doubt in the minds of the students. So, adhering to these principles will consummate our team efforts to the promising start of student's academics.

Guidelines for Laboratory Conduction

The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The assignment framing policy need to address the average students and inclusive of an element to attract and promote the intelligent students. Use of open source software is encouraged. Based on the concepts learned. Instructor may also set one assignment or mini-project that is suitable to respective branch beyond the scope of syllabus. For the elective subjects students should form group of 3-4 students. The faculty coordinator will take care that all the assignment should be assigned to class and minimum two assignments are compulsory for each group.

Programming tools recommended: -

Human computer Interface-GUI in python

Internet of Things and Embedded System- Raspberry Pi/Arduino Programming; Arduino IDE/Python Interfacing. Other IoT devices

Software project management-MS project/Gantt Project/Primavera

Virtual Laboratory:

- <u>http://vlabs.iitb.ac.in/vlabs-dev/labs/cglab/index.php</u>

Suggested List of Laboratory Experiments/Assignments Assignments from all Groups (A, B, C) are compulsory

	Part I: Systems Programming and Operating System								
Sr. No.	Group A (Any Two Assignments from Sr. No. 1 to 3)								
1.	Design suitable Data structures and implement Pass-I and Pass-II of a two-pass assembler for								
	pseudo-machine. Implementation should consist of a few instructions from each category and								
	few assembler directives. The output of Pass-I (intermediate code file and symbol table) should								
	be input for Pass-II.								

2.	Design suitable data structures and implement Pass-I and Pass-II of a two-pass macro-
	processor. The output of Pass-I (MNT, MDT and intermediate code file without any macro
	definitions) should be input for Pass-II.
3.	Write a program to recognize infix expression using LEX and YAAC.
5.	Group B (Any Two Assignments from Sr. No. 4 to 7)
4.	Write a program to solve Classical Problems of Synchronization using Mutex and Semaphore.
5.	Write a program to simulate CPU Scheduling Algorithms: FCFS, SJF (Preemptive), Priority
_	(Non-Preemptive) and Round Robin (Preemptive).
6.	Write a program to simulate Memory placement strategies – best fit, first fit, next fit and worst
	fit.
7.	Write a program to simulate Page replacement algorithm. Part II : Elective I
	Suggested List of Laboratory Experiments/Assignments (Any Two assignments from each elective subject are compulsory and Instructor will
	take care that all the assignments should be covered among different batch students)
	Internet of Things and Embedded Systems
1.	Understanding the connectivity of Raspberry-Pi / Adriano with IR sensor. Write an
	application to detect obstacle and notify user using LEDs.
2.	Understanding the connectivity of Raspberry-Pi /Beagle board circuit with temperature sensor.
	Write an application to read the environment temperature. If temperature crosses a threshold
	value, generate alerts using LEDs.
3.	Understanding and connectivity of Raspberry-Pi /Beagle board with camera. Write an
	application to capture and store the image.
4.	Create a small dashboard application to be deployed on cloud. Different publisher devices can
	publish their information and interested application can subscribe.
	Human Computer Interface
1.	Design a paper prototype for selected Graphical User Interface.
2.	Implement GOMS (Goals, Operators, Methods and Selection rules) modeling technique to
2.	model user's behavior in given scenario.
3.	Design a User Interface in Python.
4.	To redesign existing Graphical User Interface with screen complexity.
4.	Distributed System
1.	
1.	Implementation of Inter-process communication using socket programming: implementing multithreaded echo server.
2.	
	Implementation of RPC Mechanism.
3.	Simulation of election algorithms (Ring and Bully).
4.	Implementation of Clock Synchronization: a) NTP b) Lamports clock.
1	Software Project Management
1.	Create Project Plan
	 Specify project name and start (or finish) date.
	 Identify and define project tasks.
	 Define duration for each project task.
	 Define milestones in the plan
	_
	 Define dependency between tasks Define project colorder
	 Define project calendar. Define project recourses and specify recourse type
	Define project resources and specify resource type
	• Agging regourned aggingt each tools and bagaling the project right
	 Assign resources against each task and baseline the project plan

SavitribaiPhule Pune University Third Year of Computer Engineering (2019 Course) 310249: Seminar and Technical Communication

Teaching Scheme	Credit Scheme	Examination Scheme and Marks
Practical: 01 Hours/Week	01	Term Work: 50 Marks

Course Objectives:

- To explore the basic principles of communication (verbal and non-verbal) and active, empathetic listening, speaking and writing techniques
- To explore the latest technologies
- To enhance the communication skills
- To develop problem analysis skills

Course Outcomes:

On completion of the course, learners will be able to

CO1: Analyze a latest topic of professional interest

CO2: Enhance technical writing skills

CO3: Identify an engineering problem, analyze it and propose a work plan to solve it

CO4: Communicate with professional technical presentation skills

Guidelines

- Each student will select a topic in the area of Computer Engineering and Technology preferably keeping track with recent technological trends and development beyond scope of syllabus avoiding repetition in consecutive years.
- The topic must be selected in consultation with the Institute guide.
- Each student will make a seminar presentation using audio/visual aids for a duration of 20-25 minutes and submit the seminar report prepared in Latex only.
- Active participation at classmate seminars is essential.
- BoS has circulated the Seminar Log book and it is recommended to use it.

Guidelines for Assessment

Panel of staff members along with a guide would be assessing the seminar work based on these parameters-Topic, Contents and Presentation, regularity, Punctuality and Timely Completion, Question and Answers, Report, Paper presentation/Publication, Attendance and Active Participation.

Recommended Format of the Seminar Report

- Title Page with Title of the topic, Name of the candidate with Exam Seat Number / Roll Number, Name of the Guide, Name of the Department, Institution and Year and University
- Seminar Approval Sheet/Certificate
- Abstract and Keywords
- Acknowledgements
- Table of Contents, List of Figures, List of Tables and Nomenclature
- Chapters Covering topic of discussion- Introduction with section including organization of the report, Literature Survey/Details of design/technology/Analytical and/or experimental work, if any/,Discussions and Conclusions ,Bibliography/References
- Plagiarism Check report
- Report Documentation page

Savitribai Phule Pune University Third Year of Engineering (2019 Course) **310250: Audit Course 5**

In addition to credits, it is recommended that there should be audit course, in preferably in each semester starting from second year in order to supplement students' knowledge and skills. Student will be awarded the bachelor's degree if he/she earns specified total credit [1] and clears all the audit courses specified in the curriculum. The student will be awarded grade as AP on successful completion of audit course. The student may opt for one of the audit courses per semester, starting in second year first semester. Though not mandatory, such a selection of the audit courses helps the learner to explore the subject of interest in greater detail resulting in achieving the very objective of audit course's inclusion. List of options offered is provided. Each student has to choose one audit course from the list per semester. Evaluation of audit course will be done at Institute level itself. Method of conduction and method of assessment for audit courses are suggested.

Criteria

The student registered for audit course shall be awarded the grade AP (Audit Course Pass) and shall be included such AP grade in the Semester grade report for that course, provided student has the minimum attendance as prescribed by the Savitribai Phule Pune University and satisfactory performance and secured a passing grade in that audit course. No grade points are associated with this 'AP' grade and performance in these courses is not accounted in the calculation of the performance indices SGPA and CGPA. Evaluation of audit course will be done at Institute level itself [1]

Guidelines for Conduction and Assessment (Any one or more of following but not limited to):

- Lectures/ Guest Lectures
- Visits (Social/Field) and reports

Surveys

Mini-Project Hands on experience on focused topic •

Demonstrations or presentations

Course Guidelines for Assessment (Any one or more of following but not limited to):

- Written Test
- **Demonstrations/ Practical Test**
- Presentation or Report

Audit Course Code	Audit Course Title
AC5-I	Cyber Security
AC5-II	Professional Ethics and Etiquette
AC5-III	MOOC- Learn New Skills
AC5- IV	Engineering Economics
AC5-V	Foreign Language (one of Japanese/ Spanish/ French/ German). Course contents for Japanese (Module 3) are provided. For other languages institute may design suitably.

AC5-I: Cyber Security

Prerequisites: Computer Network and Security (310244)

Course Objectives:

- To motivate students for understanding the various scenarios of cybercrimes
- To increase awareness about the cybercrimes and ways to be more secure in online activities
- To learn about various methods and tools used in cybercrimes
- To analyze the system for various vulnerabilities

Course Outcomes : On completion of the course, learners will be able to

CO 1: Understand and classify various cybercrimes

- CO 2: Understand how criminals plan for the cybercrimes
- CO 3: Apply tools and methods used in cybercrime
- CO 4: Analyze the examples of few case studies of cybercrimes

Course Contents

- 1. Introduction to Cybercrime: Introduction, Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security, Cybercriminals, Classifications of Cybercrimes, Cybercrime: The Legal Perspectives, Cybercrimes: An Indian Perspective.
- 2. Cyber offenses: How Criminals Plan Them: Introduction, How Criminals Plan the Attacks, Social Engineering, Cyberstalking, Cybercafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack Vector, Cloud Computing.
- **3.** Tools and Methods Used in Cybercrime : Introduction, Proxy Servers and Anonymizers, Phishing, Password Cracking, Keyloggers and Spywares, Virus and Worms, Trojan Horses and Backdoors, Steganography, DoS and DDoS Attacks, SQL Injection, Buffer Overflow, Attacks on Wireless Networks (Expected to cover the introduction to all these terms).
- 4. Cybercrime: Illustrations, Examples and Mini-Cases: Introduction, Real-Life Examples, Mini-Cases, Illustrations of Financial Frauds in Cyber Domain, Digital Signature-Related Crime Scenarios, Digital Forensics Case Illustrations, Online Scams.

Text Books :

1. Nina Godbole, Sunit Belapure , "Cyber Security- Understanding Cyber Crimes", Computer Forensics and Legal Perspectives, Wiely India Pvt.Ltd, ISBN- 978-81-265-2179-1

2. William Stallings, "Computer Security: Principles and Practices", Pearson 6th Ed, ISBN 978-0-13-335469-0

AC5-II: Professional Ethics and Etiquettes

Prerequisites: Business Communication Skill

Course Objectives:

- To learn importance of ethics and the rules of good behavior for today's most common social and • business situations
- To acquire basic knowledge of ethics to make informed ethical decisions when confronted with problems in the working environment
- To develop an understanding towards business etiquettes and the proper etiquette practices for different business scenarios
- To learn the etiquette requirements for meetings, entertaining, telephone, email and Internet business interaction scenario

Course Outcomes:

On completion of the course, learners will be able to

CO1: Summarize the principles of proper courtesy as they are practiced in the workplace

CO2: Apply proper courtesy in different professional situations

CO3: Practice and apply appropriate etiquettes in the working environment and day to day life **CO4:** Build proper practices personal and business communications of Ethics and Etiquettes

Course Contents

- 1. Introduction to Ethics: Basics, Difference Between Morals, Ethics, and Laws, Engineering Ethics: Purpose of Engineering Ethics-Professional and Professionalism, Professional Roles to be played by an Engineer, Uses of Ethical Theories, Professional Ethics, Development of Ethics.
- 2. Professional Ethics: IT Professional Ethics, Ethics in the Business World, Corporate Social Responsibility, Improving Corporate Ethics, Creating an Ethical Work Environment, Including Ethical Considerations in Decision Making, Ethics in Information Technology, Common Ethical issues for IT Users, Supporting the Ethical Practices of IT users.
- 3. Business Etiquette: ABC's of Etiquette, Developing a Culture of Excellence, The Role of Good Manners in Business, Enduring Words Making Introductions and Greeting People: Greeting Components, The Protocol of Shaking Hands, Introductions, Introductory Scenarios, Addressing Individuals Meeting and Board Room Protocol: Guidelines for Planning a Meeting, Guidelines for Attending a Meeting.
- 4. Professional Etiquette: Etiquette at Dining, Involuntary Awkward Actions, How to Network, Networking Etiquette, Public Relations Office(PRO)'s Etiquettes, Technology Etiquette : Phone Etiquette, Email Etiquette, Social Media Etiquette, Video Conferencing Etiquette, interview Etiquette, Dressing Etiquettes : for interview, offices and social functions.

AC5-III: MOOC- Learn New Skills (Full stack Developer)

Prerequisites: Programming Skills

Course Objectives:

- To understand the fundamental concepts in designing web based applications and applying frontend and backend technologies
- To understand the fundamental concepts in applying database techniques in application
- To progress the student towards term "industry ready engineer"

Course Outcomes:

On completion of the course, learners will be able to

- CO1: Design and develop web application using frontend and backend technologies.
- CO2: Design and develop dynamic and scalable web applications

CO3: Develop server side scripts

CO4: Design and develop projects applying various database techniques

Course Contents

Full stack Developer

- 1. HTML5
- 2. CSS3
- 3. Bootstrap
- 4. Vanilla JS (ES6+)
- 5. Flask or Django
- 6. Wagtail CMS
- 7. Node.js
- 8. MySQL
- 9. jQuery

Team Projects: Design and develop an e-commerce a dynamic, scalable and responsive web application. (Sample Project similar problem statements and be formulated).

AC5-IV: Engineering Economics

Engineering economics is one of the most practical subject matters in the engineering curriculum, but it is an always challenging, ever-changing discipline. Engineers are planners and builders. They are also problem solvers, manager, decision makers. Engineering economics touches of these activities.

Course Objectives:

- To understand engineering economics and money management
- To understand financial project analysis
- To estimate project cost and apply for business
- To understand making financial decisions when acting as team member or manager in the engineering project

Course Outcomes:

On completion of the course, learners will be able to

- **CO1:** Understand economics, the cost money and management in engineering
- CO2: Analyze business economics and engineering assets evaluation
- CO3: Evaluate project cost and its elements for business
- CO4: Develop financial statements and make business decisions

Course Contents

- 1. Understanding money and its management: Engineering Economic Decisions, Time value of money, Money management, Equivalence calculations.
- 2. Evaluating business and engineering assets: Present worth analysis, Annual equivalence Analysis, Rate of Return Analysis, Benefit Cost Analysis.
- **3. Development project cash flow**: Accounting of Income Taxes, Project cash flow Analysis, Handling Project Uncertainty.
- 4. Special topics in Engineering Eonomics: Replacement decisions, understanding financial statements.

@The CO-PO Mapping Matrix

AC5-V: Foreign Language (Japanese) Module 3

Prerequisites: We recommend that candidates should have previously completed AC3-V(210251) and AC4-V (210260)

Course Objectives:

- To open up more doors and job opportunities
- To introduce to Japanese society, culture and entertainment

Course Outcomes:

On completion of the course, learners will be able to

- CO1: Apply language to communicate confidently and clearly in the Japanese language
- CO2: Understand and use Japanese script to read and write
- CO3: Apply knowledge for next advance level reading, writing and listening skills
- CO4: Develop interest to pursue further study, work and leisure

Course Contents

- 1. The Kanji: Brief Historical Outline, Introduction to Kanji, From Pictures to characters
- 2. Read and Write 58 Kanji Characters, talk about yourself/family/others, things, time, events, and activities-in the present, future, and past tense; shop at stores and order food at restaurants;
- 3. Lessons: Karate, Park(Playground), The Grandpa's Inaka, The Sun and the Moon, My little sister, Rice Fields, My Teacher, People who Exit and People who Enter.

Thi	rd Year of Con	hi Phule Pune University hputer Engineering (2019 Course) 1255: Internship**								
Teaching Scheme:	Credit: 04	Examination Scheme:								
**		Term work: 100 Marks								
Course Objectives:										
Internship provides an	excellent opportu	nity to learner to see how the conceptual aspects learned in								
classes are integrated	into the practical	world. Industry/on project experience provides much more								
professional experienc	professional experience as value addition to classroom teaching.									
• To encourage a	and provide opport	tunities for students to get professional/personal experience								
through interns	hips.									

- To learn and understand real life/industrial situations.
- To get familiar with various tools and technologies used in industries and their applications.
- To nurture professional and societal ethics.
- To create awareness of social, economic and administrative considerations in the working environment of industry organizations.

Course Outcomes:

On completion of the course, learners should be able to

CO1: To demonstrate professional competence through industry internship.

CO2: To apply knowledge gained through internships to complete academic activities in a professional manner.

CO3: To choose appropriate technology and tools to solve given problem.

CO4: To demonstrate abilities of a responsible professional and use ethical practices in day to day life.

CO5: Creating network and social circle, and developing relationships with industry people. **CO6:** To analyze various career opportunities and decide carrier goals.

**** Guidelines:**

Internships are educational and career development opportunities, providing practical experience in a field or discipline. Internships are far more important as the employers are looking for employees who are properly skilled and having awareness about industry environment, practices and culture. Internship is structured, short-term, supervised training often focused around particular tasks or projects with defined time scales.

Core objective is to expose technical students to the industrial environment, which cannot be simulated/experienced in the classroom and hence creating competent professionals in the industry and to understand the social, economic and administrative considerations that influence the working environment of industrial organizations.

Engineering internships are intended to provide students with an opportunity to apply conceptual knowledge from academics to the realities of the field work/training. The following guidelines are proposed to give academic credit for the internship undergone as a part of the Third Year Engineering curriculum.

Duration:

Internship is to be completed after semester 5 and before commencement of semester 6 of at least 4 to 6 weeks; and it is to be assessed and evaluated in semester 6.

Internship work Identification:

Student may choose to undergo Internship at Industry/Govt. Organizations/NGO/MSME/Rural Internship/ Innovation/IPR/Entrepreneurship. Student may choose either to work on innovation or entrepreneurial activities resulting in start-up or undergo internship with

industry/NGO's/Government organizations/Micro/Small/ Medium enterprises to make themselves ready for the industry [1].

Students must register at Internshala [2]. Students must get Internship proposals sanctioned from college authority well in advance. Internship work identification process should be initiated in the Vth semester in coordination with training and placement cell/ industry institute cell/ internship cell. This will help students to start their internship work on time. Also, it will allow students to work in vacation period after their Vth semester examination and before academic schedule of semester VI. Student can take internship work in the form of the following but not limited to:

Working for consultancy/ research project,

Contribution in Incubation/ Innovation/ Entrepreneurship Cell/ Institutional Innovation Council/ startups cells of institute /

Learning at Departmental Lab/Tinkering Lab/ Institutional workshop,

Development of new product/ Business Plan/ registration of start-up,

Industry / Government Organization Internship,

Internship through Internshala,

In-house product development, intercollegiate, inter department research internship under research lab/group, micro/small/medium enterprise/online internship,

Research internship under professors, IISC, IIT's, Research organizations,

NGOs or Social Internships, rural internship,

Participate in open source development.

Internship Diary/ Internship Workbook:

Students must maintain Internship Diary/ Internship Workbook. The main purpose of maintaining diary/workbook is to cultivate the habit of documenting. The students should record in the daily training diary the day-to-day account of the observations, impressions, information gathered and suggestions given, if any. The training diary/workbook should be signed every day by the supervisor. Internship Diary/workbook and Internship Report should be submitted by the students along with attendance record and an evaluation sheet duly signed and stamped by the industry to the Institute immediately after the completion of the training.

Internship Work Evaluation:

Every student is required to prepare a maintain documentary proofs of the activities done by him as internship diary or as workbook. The evaluation of these activities will be done by Programme Head/Cell In-charge/ Project Head/ faculty mentor or Industry Supervisor based on- Overall compilation of internship activities, sub-activities, the level of achievement expected, evidence needed to assign the points and the duration for certain activities.

Assessment and Evaluation is to be done in consultation with internship supervisor (Internal and External – a supervisor from place of internship.

Recommended evaluation parameters-Post Internship Internal Evaluation -50 Marks + Internship Diary/Workbook and Internship Report - 50 Marks

Evaluation through Seminar Presentation/Viva-Voce at the Institute-

The student will give a seminar based on his training report, before an expert committee constituted by the concerned department as per norms of the institute. The evaluation will be based on the following criteria:

Depth of knowledge and skills: Communication and Presentation Skills Team Work Creativity Planning and Organizational skills Adaptability Analytical Skills Attitude and Behavior at work Societal Understanding Ethics Regularity and punctuality Attendance record Diary/Work book Student's Feedback from External Internship Supervisor After completion of Internship, the student should prepare a comprehensive report to indicate what he has observed and learnt in the training period. Internship Diary/workbook may be evaluated on the basis of the following criteria: Proper and timely documented entries Adequacy & quality of information recorded Data recorded Thought process and recording techniques used Organization of the information The report shall be presented covering following recommended fields but limited to, Title/Cover Page Internship completion certificate Internship Place Details- Company background-organization and activities/Scope and object of the study / Supervisor details Index/Table of Contents Introduction Title/Problem statement/objectives Motivation/Scope and rationale of the study Methodological details Results / Analysis /inferences and conclusion Suggestions / Recommendations for improvement to industry, if any Attendance Record Acknowledgement List of reference (Library books, magazines and other sources) Feedback from internship supervisor(External and Internal) Post internship, faculty coordinator should collect feedback about student with following recommended parameters-Technical knowledge, Discipline, Punctuality, Commitment, Willingness to do the work, Communication skill, individual work, Team work, Leadership..... Savitribai Phule Pune University Third Year of Computer Engineering (2019 Course) 310256: Data Science and Big Data Analytics Laboratory

Teaching Scheme Practical: 04 Hours/Week	Credit Scheme: 02	Examination Scheme and Marks Term work: 50 Marks Practical: 25 Marks
Companion Course: Data Science and	nd Big Data Analytics	(310251)
Course Objectives:		
• To understand principles of D	ata Science for the an	alysis of real time problems
1 1	nding and implementa	ation of the key technologies in Data Science
and Big Data Analytics		

- To analyze and demonstrate knowledge of statistical data analysis techniques for decision-making
- To gain practical, hands-on experience with statistics programming languages and Big Data tools

Course Outcomes:

On completion of the course, learners will be able to

- CO1: Apply principles of Data Science for the analysis of real time problems
- CO2: Implement data representation using statistical methods
- **CO3:** Implement and evaluate data analytics algorithms
- **CO4:** Perform text preprocessing
- **CO5:** Implement data visualization techniques
- **CO6:** Use cutting edge tools and technologies to analyze Big Data

Guidelines for Instructor's Manual

The instructor's manual is to be developed as a reference and hands-on resource. It should include prologue (about University/program/ institute/ department/foreword/ preface), curriculum of the course, conduction and Assessment guidelines, topics under consideration, concept, objectives, outcomes, set of typical applications/assignments/ guidelines, and references.

Guidelines for Student's Laboratory Journal

The laboratory assignments are to be submitted by student in the form of journal. Journal consists of Certificate, table of contents, and handwritten write-up of each assignment (Title, Date of Completion, Objectives, Problem Statement, Software and Hardware requirements, Assessment grade/marks and assessor's sign, Theory- Concept in brief, algorithm, flowchart, test cases, Test Data Set(if applicable), mathematical model (if applicable), conclusion/analysis. Program codes with sample output of all performed assignments are to be submitted as softcopy. As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers as part of write-ups and program listing to journal must be avoided. Use of DVD containing students programs maintained by Laboratory In-charge is highly encouraged. For reference one or two journals may be maintained with program prints in the Laboratory.

Guidelines for Laboratory /Term Work Assessment

Continuous assessment of laboratory work should be based on overall performance of Laboratory assignments by a student. Each Laboratory assignment assessment will assign grade/marks based on parameters, such as timely completion, performance, innovation, efficient codes, punctuality and

Guidelines for Practical Examination

Problem statements must be decided jointly by the internal examiner and external examiner. During practical assessment, maximum weightage should be given to satisfactory implementation of the problem statement. Relevant questions may be asked at the time of evaluation to test the student's understanding of the fundamentals, effective and efficient implementation. This will encourage, transparent evaluation and fair approach, and hence will not create any uncertainty or doubt in the minds of the students. So, adhering to these principles will consummate our team efforts to the promising start of student's academics.

Home

Guidelines for Laboratory Conduction

The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The assignment framing policy need to address the average students and inclusive of an element to attract and promote the intelligent students. Use of open source software is encouraged. Based on the concepts learned. Instructor may also set one assignment or mini-project that is suitable to respective branch beyond the scope of syllabus.

Set of suggested assignment list is provided in groups- A and B. Each student must perform 13 assignments (10 from group A, 3 from group B), 2 mini project from Group C

Operating System recommended :- 64-bit Open source Linux or its derivative

Programming tools recommended: - JAVA/Python/R/Scala

Virtual Laboratory:

- "Welcome to Virtual Labs A MHRD Govt of india Initiative"
- <u>http://cse20-iiith.vlabs.ac.in/List%20of%20Experiments.html?domain=Computer%20Science</u>

Suggested List of Laboratory Experiments/Assignments Assignments from all Groups (A,B,C) are compulsory.

Sr. No.	Group A : Data Science
1.	Data Wrangling, I
1.	Perform the following operations using Python on any open source dataset (e.g., data.csv)
	1. Import all the required Python Libraries.
	2. Locate an open source data from the web (e.g., https://www.kaggle.com). Provide a clear
	description of the data and its source (i.e., URL of the web site).
	3. Load the Dataset into pandas dataframe.
	4. Data Preprocessing: check for missing values in the data using pandas isnull(), describe()
	function to get some initial statistics. Provide variable descriptions. Types of variables etc.
	Check the dimensions of the data frame.
	5. Data Formatting and Data Normalization: Summarize the types of variables by checking
	the data types (i.e., character, numeric, integer, factor, and logical) of the variables in the
	data set. If variables are not in the correct data type, apply proper type conversions.
	6. Turn categorical variables into quantitative variables in Python.
	In addition to the codes and outputs, explain every operation that you do in the above steps and
	explain everything that you do to import/read/scrape the data set.
2.	Data Wrangling II
	Create an "Academic performance" dataset of students and perform the following operations using
	Python.
	1. Scan all variables for missing values and inconsistencies. If there are missing values and/or
	inconsistencies, use any of the suitable techniques to deal with them.
	2. Scan all numeric variables for outliers. If there are outliers, use any of the suitable
	techniques to deal with them.
	3. Apply data transformations on at least one of the variables. The purpose of this
	transformation should be one of the following reasons: to change the scale for better
	understanding of the variable, to convert a non-linear relation into a linear one, or to
	decrease the skewness and convert the distribution into a normal distribution.
	Reason and document your approach properly.

3.	Descriptive Statistics - Measures of Central Tendency and variability
	 Perform the following operations on any open source dataset (e.g., data.csv) 1. Provide summary statistics (mean, median, minimum, maximum, standard deviation) for a dataset (age, income etc.) with numeric variables grouped by one of the qualitative (categorical) variable. For example, if your categorical variable is age groups and quantitative variable is income, then provide summary statistics of income grouped by the age groups. Create a list that contains a numeric value for each response to the categorical variable. 2. Write a Python program to display some basic statistical details like percentile, mean,
	2. Write a Fython program to display some basic statistical details like percentile, mean, standard deviation etc. of the species of 'Iris-setosa', 'Iris-versicolor' and 'Iris-versicolor' of iris.csv dataset.
	Provide the codes with outputs and explain everything that you do in this step.
4.	Data Analytics I Create a Linear Regression Model using Python/R to predict home prices using Boston Housing Dataset (https://www.kaggle.com/c/boston-housing). The Boston Housing dataset contains information about various houses in Boston through different parameters. There are 506 samples and 14 feature variables in this dataset.
	The objective is to predict the value of prices of the house using the given features.
5.	 Data Analytics II 1. Implement logistic regression using Python/R to perform classification on Social_Network_Ads.csv dataset. 2. Compute Confusion matrix to find TP, FP, TN, FN, Accuracy, Error rate, Precision, Recall on the given dataset.
6.	Data Analytics III
0.	 Implement Simple Naïve Bayes classification algorithm using Python/R on iris.csv dataset. Compute Confusion matrix to find TP, FP, TN, FN, Accuracy, Error rate, Precision, Recall on the given dataset.
7.	Text Analytics
	 Extract Sample document and apply following document preprocessing methods: Tokenization, POS Tagging, stop words removal, Stemming and Lemmatization. Create representation of document by calculating Term Frequency and Inverse Document Frequency.
8.	Data Visualization I
	 Use the inbuilt dataset 'titanic'. The dataset contains 891 rows and contains information about the passengers who boarded the unfortunate Titanic ship. Use the Seaborn library to see if we can find any patterns in the data.
	2. Write a code to check how the price of the ticket (column name: 'fare') for each passenger is distributed by plotting a histogram.
9.	Data Visualization II
	1. Use the inbuilt dataset 'titanic' as used in the above problem. Plot a box plot for distribution of age with respect to each gender along with the information about whether they survived or not. (Column names : 'sex' and 'age')
	2. Write observations on the inference from the above statistics.

ſ	10.	Data Visualization III
		Download the Iris flower dataset or any other dataset into a DataFrame. (e.g., https://archive.ics.uci.edu/ml/datasets/Iris). Scan the dataset and give the inference as:
		 List down the features and their types (e.g., numeric, nominal) available in the dataset. Create a histogram for each feature in the dataset to illustrate the feature distributions.
		3. Create a boxplot for each feature in the dataset.
		4. Compare distributions and identify outliers.
		Group B- Big Data Analytics – JAVA/SCALA (Any three)
	1.	Write a code in JAVA for a simple WordCount application that counts the number of
		occurrences of each word in a given input set using the Hadoop MapReduce framework on local-standalone set-up.
	2.	Design a distributed application using MapReduce which processes a log file of a system.
	3.	Locate dataset (e.g., sample_weather.txt) for working on weather data which reads the text input files and finds average for temperature, dew point and wind speed.
	4.	Write a simple program in SCALA using Apache Spark framework
		Group C- Mini Projects/ Case Study – PYTHON/R (Any TWO Mini Project)
	1.	Write a case study on Global Innovation Network and Analysis (GINA). Components of analytic plan are 1. Discovery business problem framed, 2. Data, 3. Model planning analytic technique and 4. Results and Key findings.
	2.	Use the following dataset and classify tweets into positive and negative tweets. https://www.kaggle.com/ruchi798/data-science-tweets
	3.	Develop a movie recommendation model using the scikit-learn library in python. Refer dataset
	1	https://github.com/rashida048/Some-NLP-Projects/blob/master/movie_dataset.csv
	4.	Use the following covid_vaccine_statewise.csv dataset and perform following analytics on the given dataset <u>https://www.kaggle.com/sudalairajkumar/covid19-in-india?select=covid_vaccine_statewise.csv</u> a. Describe the dataset
		b. Number of persons state wise vaccinated for first dose in India
		c. Number of persons state wise vaccinated for second dose in India
		d. Number of Males vaccinated
	5	d. Number of females vaccinated
	5.	 Write a case study to process data driven for Digital Marketing OR Health care systems with Hadoop Ecosystem components as shown. (Mandatory) HDFS: Hadoop Distributed File System YARN: Yet Another Resource Negotiator MapReduce: Programming based Data Processing Spark: In-Memory data processing
		• PIG, HIVE: Query based processing of data services
		 HBase: NoSQL Database (Provides real-time reads and writes) Mahout, Spark MLLib: (Provides analytical tools) Machine Learning algorithm
		• Manout, Spark MILLIO. (Flovides analytical tools) Machine Learning algorithm libraries

• Solar, Lucene: Searching and Indexing

Savitribai Phule Pune University Third Year of Computer Engineering (2019 Course) 310257: Web Technology Laboratory

Teaching Scheme	Credit Scheme	Examination Scheme and Marks
Practical: 02 Hours/Week	01	Term Work: 25 Marks
		Oral: 25 Marks
Companion Course : Web Techno	logy (310252)	
Course Objectives:		

- To learn the web based development environment
- To use client side and server side web technologies
- To design and develop web applications using front end technologies and backend databases

Course Outcomes:

On completion of the course, learners will be able to

- CO1: Understand the importance of website planning and website design issues
- CO2: Apply the client side and server side technologies for web application development
- CO3: Analyze the web technology languages, frameworks and services

CO4: Create three tier web based applications

Guidelines for Instructor's Manual

The instructor's manual is to be developed as a reference and hands-on resource. It should include prologue (about University/program/ institute/ department/foreword/ preface), curriculum of the course, conduction and Assessment guidelines, topics under consideration, concept, objectives, outcomes, set of typical applications/assignments/ guidelines, and references.

Guidelines for Student's Laboratory Journal

The laboratory assignments are to be submitted by student in the form of journal. Journal consists of Certificate, table of contents, and handwritten write-up of each assignment (Title, Date of Completion, Objectives, Problem Statement, Software and Hardware requirements, Assessment grade/marks and assessor's sign, Theory- Concept in brief, algorithm, flowchart, test cases, Test Data Set(if applicable), mathematical model (if applicable), conclusion/analysis. Program codes with sample output of all performed assignments are to be submitted as softcopy. As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers as part of write-ups and program listing to journal must be avoided. Use of DVD containing students programs maintained by Laboratory In-charge is highly encouraged. For reference one or two journals may be maintained with program prints in the Laboratory.

Guidelines for Laboratory /Term Work Assessment

Continuous assessment of laboratory work should be based on overall performance of Laboratory assignments by a student. Each Laboratory assignment assessment will assign grade/marks based on parameters, such as timely completion, performance, innovation, efficient codes, and punctuality.

Guidelines for Oral Examination

Oral examination should be jointly conducted by the internal examiner and external examiner. Relevant questions may be asked at the time of evaluation to test the student's understanding of the fundamentals, effective and efficient implementations in term work. This will encourage, transparent evaluation and fair approach, and hence will not create any uncertainty or doubt in the minds of the students. So, adhering to these principles will consummate our team efforts to the promising start of student's academics.

Guidelines for Laboratory Conduction

The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The assignment framing policy need to address the average students and inclusive of an element to attract and promote the intelligent students. Use of open source software is encouraged. Based on the concepts learned. Mini project should be implemented by

prologue (about University/program/ institute/ department/foreword/ preface), curriculum of the course,

Home

conduction and Assessment guidelines, topics under consideration, concept, objectives, outcomes, set of typical applications/assignments/ guidelines, and references.

Guidelines for Student's Laboratory Journal

The laboratory assignments are to be submitted by student in the form of journal. Journal consists of Certificate, table of contents, and handwritten write-up of each assignment (Title, Date of Completion, Objectives, Problem Statement, Software and Hardware requirements, Assessment grade/marks and assessor's sign, Theory- Concept in brief, algorithm, flowchart, test cases, Test Data Set(if applicable), mathematical model (if applicable), conclusion/analysis. Program codes with sample output of all performed assignments are to be submitted as softcopy. As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers as part of write-ups and program listing to journal must be avoided. Use of DVD containing students programs maintained by Laboratory In-charge is highly encouraged. For reference one or two journals may be maintained with program prints in the Laboratory.

Guidelines for Laboratory /Term Work Assessment

Continuous assessment of laboratory work should be based on overall performance of Laboratory assignments by a student. Each Laboratory assignment assessment will assign grade/marks based on parameters, such as timely completion, performance, innovation, efficient codes, punctuality and

Guidelines for Practical Examination

Problem statements must be decided jointly by the internal examiner and external examiner. During practical assessment, maximum weightage should be given to satisfactory implementation of the problem statement. Relevant questions may be asked at the time of evaluation to test the student's understanding of the fundamentals, effective and efficient implementation. This will encourage, transparent evaluation and fair approach, and hence will not create any uncertainty or doubt in the minds of the students. So, adhering to these principles will consummate our team efforts to the promising start of student's academics.

Guidelines for Laboratory Conduction

The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The assignment framing policy need to address the average students and inclusive of an element to attract and promote the intelligent students. Use of open source software is encouraged. Based on the concepts learned. Instructor may also set one assignment or mini-project that is suitable to respective branch beyond the scope of syllabus.

Operating System recommended :- 64-bit Windows OS and Linux

Programming tools recommended: -

Information Security : - C/C++/Java

Augmented and Virtual Reality :- Unity, C#, Blender, VRTK, ARTK, Vuforia

VR Devices: HTC Vive, Google Daydream and Samsung gear VR.

Cloud Computing :-Software Modeling and Architectures: Front end:HTML5, Bootstrap, jQuery, JS etc. Backend: MySQL/MongoDB/NodeJS

Virtual Laboratory:

Software Modeling and Architectures : <u>http://vlabs.iitkgp.ernet.in/se</u> Information Security : <u>http://cse29-iiith.vlabs.ac.in</u>

Part I : Artificial Intelligence

Suggested List of Laboratory Experiments/Assignments

Sr.	Group A
No.	All assignments are compulsory
1.	Implement depth first search algorithm and Breadth First Search algorithm, Use an undirected
	graph and develop a recursive algorithm for searching all the vertices of a graph or tree data
	structure.
2.	Implement A star Algorithm for any game search problem.

3.	Implement Greedy search algorithm for any of the following application:
	I. Selection Sort
	II. Minimum Spanning Tree
	III. Single-Source Shortest Path Problem
	IV. Job Scheduling Problem
	V. Prim's Minimal Spanning Tree Algorithm
	VI. Kruskal's Minimal Spanning Tree Algorithm
	VII. Dijkstra's Minimal Spanning Tree Algorithm
	VII. Dijkstu s Minimai Spanning Tree Algoritum
	Group B
4.	Implement a solution for a Constraint Satisfaction Problem using Branch and Bound and Backtracking for n-queens problem or a graph coloring problem.
	Backfracking for it queens problem of a graph coloring problem.
5.	Develop an elementary chatbot for any suitable customer interaction application.
	Group C
6.	Implement any one of the following Expert System
	I. Information management
	II. Hospitals and medical facilities
	III. Help desks management
	IV. Employee performance evaluation
	V. Stock market trading
	VI. Airline scheduling and cargo schedules
	Part II : Elective II

5. Develop and deploy a simple marker based AR app in which you have to write a	<u><u><u></u></u><u></u><u></u><u></u><u></u><u></u><u></u><u></u><u></u><u></u><u></u><u></u><u></u><u></u><u></u><u></u><u></u><u></u></u>
	C# program to
play video on tracking a particular marker.	
6. Develop and deploy an AR app, implement the following using Vuforia Engine de	eveloper portal:
i. Plane detection	• •
ii. Marker based Tracking(Create a database of objects to be tracked in Vufor	ria)
iii. Object Tracking	
7. Mini-Projects/ Case Study	6 f
Create a multiplayer VR game (battlefield game). The game should keep track of chances/lives, levels (created using different scenes), involve interaction, animatic	
immersive environment.	
OR Create a traceware hunt AD application which should have the following features:	
Create a treasure hunt AR application which should have the following features: i. A help button for instruction box to appear.	
ii. A series of markers which would give hints on being scanned.	
iii. Involve interaction, sound, and good UI.	
Software Modeling and Architectures	
(Problem statement 1, 2, 3 or 4, Problem statement 5 and 6 are mand	datory)
1. Consider a library, where a member can perform two operations: issue book and i	
book is issued to a member only after verifying his credentials. Develop a use cas	
the given library system by identifying the actors and use cases and associate the	-
the actors by drawing a use case diagram. Use UML tool.	
2. Consider online shopping system. Perform the following tasks and draw the class	s diagram
using UML tool.	-
Represent the individual classes, and objects	
Add methods	
Represent relationships and other classifiers like interfaces	
3. Consider the online shopping system in the assignment 2.	

#92/87

Draw the sequence diagram using UML tool to show message exchanges

- 4. Consider your neighboring travel agent from whom you can purchase flight tickets. To book a ticket you need to provide details about your journey i.e., on which date and at what time you would like to travel. You also need to provide your address. The agency has recently been modernized. So, you can pay either by cash or by card. You can also cancel a booked ticket later if you decide to change your plan. In that case you need to book a new ticket again. Your agent also allows you to book a hotel along with flight ticket. While cancelling a flight ticket you can also cancel hotel booking. Appropriate refund as per policy is made in case of cancellation. Perform the following tasks and draw the use case diagram using UML tool.
 - a. Identify the use cases from a given non-trivial problem statement.
 - b. Identify the primary and secondary actors for a system.
 - **c.** Use to generalization of use cases and «include» stereotypes to prevent redundancy in the coding phase

Mini-Projects

5. Select a moderately complex system and narrate concise requirement Specification for the same. Design the system indicating system elements organizations using applicable architectural styles and design patterns with the help of a detailed Class diagram depicting logical architecture. Specify and document the architecture and design pattern with the help of templates. Implement the system features and judge the benefits of the design patterns accommodated.

Curriculum for Third Year of Computer Engineering (2019 Course), Savitribai Phule Pune University

Savitribai Phule Pune University Third Year of Engineering (2019 Course) 310259: Audit Course 6

In addition to credits, it is recommended that there should be audit course, in preferably in each semester starting from second year in order to supplement students' knowledge and skills. Student will be awarded the bachelor's degree if he/she earns specified total credit [1] and clears all the audit courses specified in the curriculum. The student will be awarded grade as AP on successful completion of audit course. The student may opt for one of the audit courses per semester, starting in second year first semester. Though not mandatory, such a selection of the audit courses helps the learner to explore the subject of interest in greater detail resulting in achieving the very objective of audit course's inclusion. List of options offered is provided. Each student has to choose one audit course from the list per semester. Evaluation of audit course will be done at institute level itself. Method of conduction and method of assessment for audit courses are suggested.

Criteria

The student registered for audit course shall be awarded the grade AP (Audit Course Pass) and shall be included such AP grade in the Semester grade report for that course, provided student has the minimum attendance as prescribed by the Savitribai Phule Pune University and satisfactory performance and secured a passing grade in that audit course. No grade points are associated with this 'AP' grade and performance in these courses is not accounted in the calculation of the performance indices SGPA and CGPA. Evaluation of audit course will be done at institute level itself [1]

Guidelines for Conduction and Assessment (Any one or more of following but not limited to):

- Lectures/ Guest Lectures
- Visits (Social/Field) and reports

- Surveys
- Mini-Project

• Demonstrations

• Hands on experience on focused topic

Course Guidelines for Assessment (Any one or more of following but not limited to):

- Written Test
- Demonstrations/ Practical Test
- Presentations, IPR/Publication and Report

	Audit Course 6 Options
Audit Course Code	Audit Course Title
AC6-I	Digital and Social Media Marketing
AC6-II	Sustainable Energy Systems
AC6-III	Leadership and Personality Development
AC6-IV	Foreign Language (one of Japanese/Spanish/French/German). Course contents for Japanese (Module 4) are provided. For other languages institute may design suitably.
AC6-V	MOOC- Learn New Skills
http://collegecirc	tted to opt one of the audit courses listed at SPPU website too, if not opted earlier. ulars.unipune.ac.in/sites/documents/Syllabus%202017/Forms/AllItems.aspx une.ac.in/university_files/syllabi.htm

Curriculum for Third Year of Computer Engineering (2019 Course), Savitribai Phule Pune University

AC6-II Sustainable Energy Systems

Prerequisites: General awareness of environment and natural resources of energy

Course Objectives:

- To understand the importance of sustainable energy systems development
- To create awareness about renewable energy sources and technologies
- To learn about adequate inputs on a variety of issues in harnessing renewable energy
- To recognize current and possible future role of renewable energy sources

Course Outcomes:

On completion of the course, learners will be able to

CO1: Comprehend the importance of Sustainable Energy Systems

CO2: Correlate the human population growth and its trend to the natural resource degradation and develop the awareness about his/her role towards Sustainable Energy Systems protection **CO3:** Identify different types of natural resource pollution and control measures

CO4: Correlate the exploitation and utilization of conventional and non-conventional resources

Course Contents

- 1. **Wind Energy:** Power in the Wind, Types of Wind Power Plants (WPPs), Components of WPPs, Working of WPPs, Siting of WPPs, Grid integration issues of WPPs.
- 2. Solar Pv and Thermal Systems: Solar Radiation, Radiation Measurement, Solar Thermal Power Plant, Central Receiver Power Plants, Solar Ponds, Thermal Energy storage system with PCM, Solar Photovoltaic systems: Basic Principle of SPV conversion, Types of PV Systems, Types of Solar Cells, Photovoltaic cell concepts: Cell, module, array, PV Module I-V Characteristics, Efficiency and Quality of the Cell, series and parallel connections, maximum power point tracking, Applications.
- 3. Other Energy Sources: Tidal Energy: Energy from the tides, Barrage and Non Barrage Tidal power systems. Wave Energy: Energy from waves, wave power devices. Ocean Thermal Energy Conversion (OTEC), Hydrogen Production and Storage. Fuel cell: Principle of working, various types, construction and applications. Energy Storage System, Hybrid Energy Systems.

Reference Books :

- 1. Joshua Earnest, Tore Wizeliu, "Wind Power Plants and Project Development", PHI Learning Pvt.Ltd, New Delhi, 2011.
- 2. D.P.Kothari, K.C Singal, Rakesh Ranjan, "Renewable Energy Sources and Emerging Technologies", PHI Learning Pvt.Ltd, New Delhi, 2013.

<u>(*a*) The CO-PO Mapping Matrix</u>

AC6-III Leadership and Personality Development

Prerequisites: General awareness of communication and relationship.

Course Objectives:

- To understand the importance of communication
- To create awareness about teamwork and people skills
- To know thyself
- To recognize current and possible future of new-age thinking

Course Outcomes:

On completion of the course, learners will be able to

- **CO1:** Express effectively through communication and improve listening skills
- **CO3:** Develop effective team leadership abilities.
- CO4: Explore self-motivation and practicing creative/new age thinking.
- **CO5:** Operate effectively in heterogeneous teams through the knowledge of team work, people skills and leadership qualities.

Course Contents

1. Communication :

Listening Skills, Communication - 7 C's, Vision and Charisma, Planning and Organizing - Complex Tasks and Ideas --> Actionable Tasks, Presentation Skills.

2. Teamwork and People Skills :

Talent Picking skills, Strong networking and Employee engagement, Coach and Mentor the team, Influencing, Delegate and Empower, Generous, open communicator, Patience and Clarity of Mind, Inspire and Motivate, Ensure Team Cohesion, Empathy, Trust and Reliability.

3. New-age Thinking :

Strategic Thinking, Critical and Lateral Thinking, Problem Solving Skills, Flexibility, Change Management – VUCA.

4. Self-Awareness :

What is Self? – Real, Ideal and Social Self, Concepts related to Self - Self Concept, Self-Presentation, Self-Regulation and Impression Management, Definition and Causes of Prejudice, Relationship between Prejudice, Discrimination and Exclusion, Application – Attitudinal Change and Reducing Prejudices, Self Esteem and Self Awareness, SWOT – JOHARI, Self Esteem Quiz, Introduce Your Partner, Self Introduction - How to sell yourself?-appearance, voice modulation, verbal(simple language), Motivation and Optimism, Positive Emotions and Success.

AC6-V: MOOC- Learn New Skills

Prerequisites: Software Engineering (210253)

http://collegecirculars.unipune.ac.in/sites/documents/Syllabus2020/Forms/AllItems.aspx

Course Objectives:

- To understand the fundamentals of DevOps
- To understand the Agility and ways of Agility
- To understand the software development using Agility approach

Course Outcomes:

On completion of the course, learner will be able to

CO1: Illustrate the agility and principles

CO2: Understand the software development using agile methodology

CO3: Apply DevOps for the software product development

CO4: Develop software products for early delivery through continual feedback and learning

Course Contents

- 1. **THE THREE WAYS :** Agile, continuous delivery and the three ways, The First Way: The Principles of Flow, The Second Way: The Principle of Feedback, The Third Way: The Principles of Continual Learning.
- 2. WHERE TO START : Selecting which value stream to start with, Understanding the work in our value stream..., How to design our organization and architecture, How to get great outcomes by integrating operations into the daily work for development.
- 3. **THE FIRST WAY: THE TECHNICAL PRACTICES OF FLOW :** Create the foundations of our deployment pipeline, Enable fast and reliable automated testing, Enable and practice continuous integration, Automate and enable low-risk releases, Architect for low-risk releases.
- 4. **THE SECOND WAY: THE TECHNICAL PRACTICES OF FEEDBACK :** Create telemetry to enable seeing and solving problems, Analyze telemetry to better anticipate problems, Enable feedback so development and operation can safely deploy code, Integrate hypothesis-driven development and A/B testing into our daily work, Create review and coordination processes to increase quality of our current work.
- 5. **THE THRID WAY: THE TECHNICAL PRACTICES OF CONTINUAL LEARNING :** Enable and inject learning into daily work, Convert local discoveries into global improvements, Reserve time to create organizational learning, Information security as everyone's job, every day, Protecting the deployment pipeline.

Acknowledgement

It is with great pleasure and honor that I share the curriculum for Third Year of Computer Engineering (2019 Course) on behalf of Board of Studies (BoS), Computer Engineering. We, members of BoS are giving our best to streamline the processes and curricula design at both UG and PG programs.

It is always the strenuous task to balance the curriculum with the blend of core courses, current developments and courses to understand social and human values. By considering all the aspects with adequate prudence the contents are designed satisfying most of the necessities as per AICTE guidelines and to make the graduate competent enough as far as employability is concerned. I sincerely thank all the minds and hands who work adroitly to materialize these tasks. I really appreciate everyone's contribution and suggestions in finalizing the contents.

Success is sweet. But it's sweeter when it's achieved thorough co-ordination, cooperation and collaboration. I am overwhelmed and I feel very fortunate to be working with such a fabulous team-the Members of Board of Studies, Computer Engineering!

Even in these anxious situation, during the time of this unfortunate pandemic, each and every person, including the course coordinators and their team members, have worked seamlessly to come up with this all-inclusive curriculum for Third Year of Computer Engineering.

Thank you to all of you for delivering such great teamwork. I don't think it would have been possible to achieve the goal without each and every one of your efforts! I would like to express my deep gratitude to **Dr. Pramod D. Patil (Dr. D. Y. Patil Institute of Technology, Pimpri), member BoS, Computer Engineering**, for coordinating the complete activity and getting it to completion in a smooth manner.

I deeply appreciate and thank the managements of various colleges affiliated to SPPU for helping us in this work. These colleges have helped us by arranging sessions for preliminary discussion in the initial stage and at the same time in conducting Faculty Development Programs for various courses of the revised curriculum. All your support is warmly appreciated.

I sincerely appreciate, the hard work put in by the course coordinators and their team members, without your intellectual work and creative mind, and it would have not been possible to complete this draft. You have been a valuable member of our team!

Special thanks are due to Dr. Santosh Kumar Chobe, Dr. Jyoti Rao, Dr. Swati Nikam, Dr. C. R. Jadhav, Dr. S. S. Das, Dr. Rachna Somkunwar, Prof. Rajesh D. Bharati, Prof. Rupesh Mahajan for helping with the formatting and crisp presentation of this draft. I would like to thank you from the core of my heart. Thank you for always being your best selves and contributing to the work.

I am thankful to Prof. Abhijit D. Jadhav, Dr. D. Y. Patil Institute of Technology, Pimpri for the time he has spent in critically reading the draft and giving the final touches. I appreciate his initiative and thank him for his time, patience and hard work!

Thank you all, for not only your good work but also for all the support you have given each other throughout the drafting process, that's what makes the team stronger! You took the meaning of teamwork to a whole new level.

Thank you for all your efforts!

Professor (Mrs.) Dr. Varsha H. Patil

Chairman, Board of Studies (BoS), Computer Engineering, Faculty of Science and Technology, Savitribai Phule Pune University.

BoS Members- Dr. Shirish Sane, Dr. Sunil Bhirud, Dr. Manik Dhore, Dr. Pramod Patil, Dr. Rajesh Prasad, Dr. Girish Khilari, Dr. Sachin Lodha, Dr. Parikshit Mahalle, Dr. Venkatesharan, Dr. Geetanjali Kale, Dr. Suhasini Itkar, Dr. R. V. Patil and Dr. P. M. Yawalkar.
